

## Programs

1

1 Develop static pages (using Only HTML) of an online Book store. The pages should resemble: www.amazon.com. The website should consist the following pages.

- Home page
- Registration
- User Login
- Books catalog

2. Develop static pages (using only HTML) of an online Book store. The pages should resemble: www.amazon.com. The website should consist the following pages.

- Home page
- Registration and user Login
- User profile page
- Books catalog
- Shopping cart
- Payment by credit card
- Order Confirmation

Validate the Registration, user login, user profile and payment by credit card pages using JavaScript?

3. Create and save an XML document at the server, which contain some users information. Write a program, which takes user id as an input and returns the user details by taking the user information from the XML document.

4. Develop a javabean which gives the exchange value of INR (Indian rupees) into equivalent American/Canadian/ Australian dollar

5. Create two beans traffic light (only 3 colors – red, green, yellow) and automobile (implemented as a Textbox which states its state/movement). The state of the Automobile should depend on the following transmission table

Light Transition	Automobile State
Red -> yellow	Ready
Yellow -> Green	Move
Green -> Red	Stopped

6. . Install TOMCAT web server. Convert the static webpages of assignments 2 into dynamic webpages using servlets and cookies. Hint: Users information (user id, password, credit card number) would be stored in web.xml. Each user should have a separate Shopping Cart.

7. Redo the previous task using JSP by converting the static web pages of assignments 2 into dynamic web pages. Create a database with user information and books information and books information. The books catalogue should be dynamically loaded from the database. Follow the MVC architecture while doing the website.

8. Implement the "Hello World!" program using JSP Struts Framework

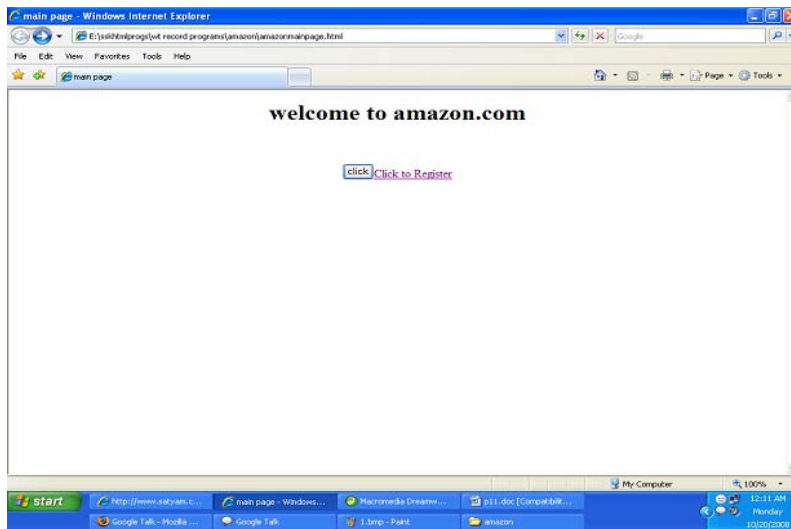

**AIM:**

1. Develop static pages (using Only HTML) of an online Book store. The pages should resemble: [www.amazon.com](http://www.amazon.com). The website should consist of the following pages.

- Home page
- Registration
- User Login
- Books catalog
- 

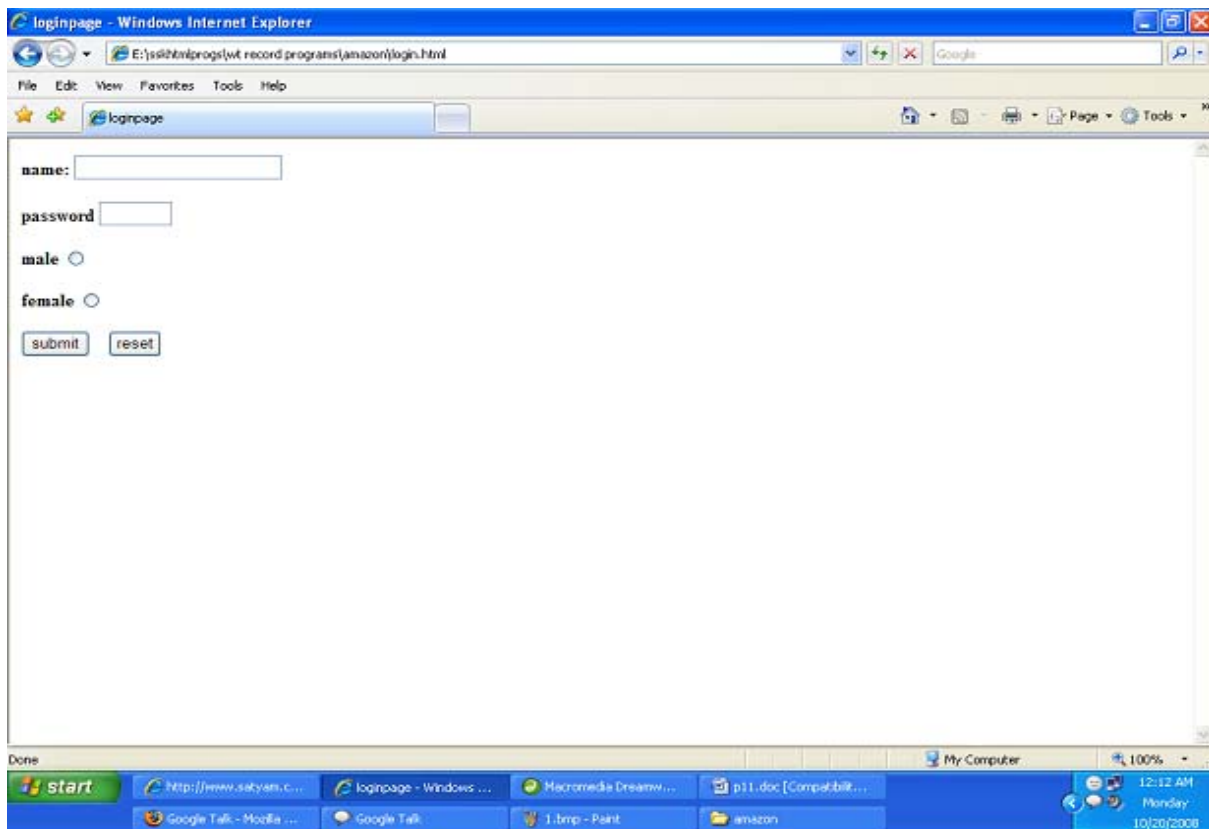

**PROCEDURE:****Main page:**

```
<html>
<head>
<title>home page</title>
</head>
<body>
<center><b><h1>welcome to amazon.com</h1></b><br><br>
<form method="post"action="login.html">
<input type="submit" value="click">registration user login hear
</center>
</body>
</html>
```

**Login page:**

```
<html>
<head>
<title>login page</title>
</head>
<body>
<center>
<form method="post" action="login.html">
<p><strong>name:</strong>
<input type="text" name="username" size="25">
</p>
<p><strong>password</strong>
<input name="pass" type="password" size="6"></p>
<p><strong>male</strong>
<input type="radio" value="male"<hacked>&nbsp;&nbsp;&nbsp;</p>
<p><strong>female</strong>
<option><input type="radio" value="female"<hacked>&nbsp;&nbsp;&;</p>
<input type="submit" value="submit">&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;
<input type="reset" value="reset">
<a href="registration.html">new users register hear </a>
</form>
</center>
</body>
</html>
```

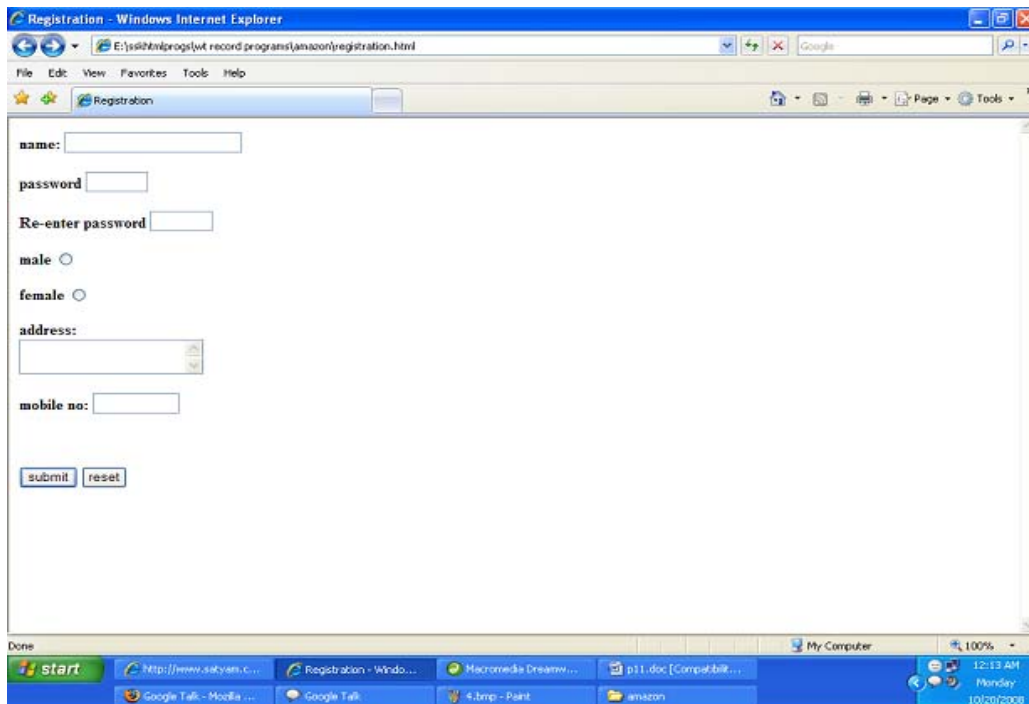

**Registration:**

```

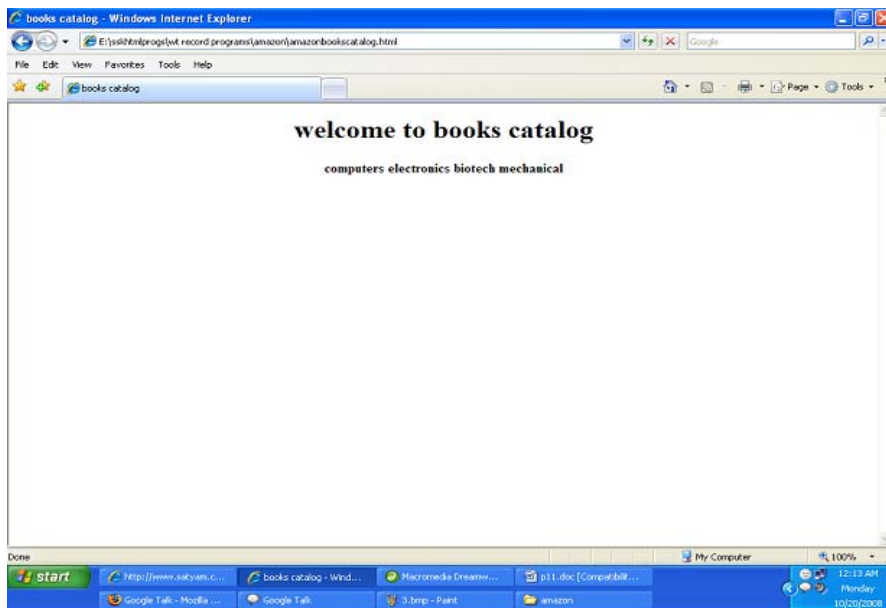

<html>
<head>
<title>registration</title>
</head>
<body>
<center>
<form method="post" action="login.html">
<p><strong>name:</strong>
<input type="text" name="username" size="25">
</p>
<p><strong>password</strong>
<input name="pass" type="password" size="6"></p>
<p><strong>male</strong>
<input type="radio" value="male"<hacked>&nbsp;&nbsp;&nbsp;</p>
<p><strong>female</strong>
<input type="radio" value="female" </p>
<p><strong>address:</strong>
<textarea name="address" row="6" cols="20">
</textarea>
</p>
<p><strong>mobile no:</strong>
<input type="text" name="phno" size="10">
</p><br><br>
<input type="submit" value="submit">
<input type="reset" value="reset">
</form>
</center>
</body>
</html>

```

**Books Catalog:**

```
<html>
<head>
<title>books catalog</title>
</head>
<body>
<center><h1><p>welcome to books catalog</p></h1>
<table border="1"width="25%"height="50%">
<tr>
<th>computers</th>
<th>electronics</th>
<th>biotech</th>
<th>mechanical</th>
</tr>
<tr>
<td>
</td>
</body>
</html>
```

**AIM:**

2. Develop static pages (using only HTML) of an online Book store. The pages should resemble: [www.amazon.com](http://www.amazon.com). The website should consists of the following pages.

- Home page
- Registration and user Login
- User profile page
- Books catalog
- Shopping cart
- Payment by credit cardtt
- Order Conformation

2. Validate the Registration, user login, user profile and payment by credit card pages using JavaScript.

**PROCEDURE:****Main.html:**

```
<frameset rows="25%, 75 %">
<frame src="top.html" name="top">
<frameset cols="25%,75%">
<frame src="left.html" name="left">
<frame src="right.html" name="right">
</frameset>
</frameset>
```

**Top.html:**

```
<html>
<body bgcolor="pink">
<br><br>

```

4. Develop a javabean which gives the exchange value of INR(Indian rupees) into equivalent American/canadan/Australian dollor value.

**Indian.java :**

```
package currency;
import java.beans.*;
import java.awt.*;
import java.awt.event.*;
public class Indian extends Canvas
{
private double rupees;
private String other;

public Indian()
{
setSize(200,25);
other="America";
}

public void setRupees(double amount)
{
rupees=amount;
repaint();
}
public double getRupees()
{
return rupees;
}

public void setOther(String other)
{
this.other=other;
repaint();
}

public String getOther()
{
return other;
}

public void paint(Graphics g)
{
    if(other.equals("America"))
    {
        g.drawString(String.valueOf(rupees/42),20,20);
    }

elseif(other.equals("Australia"))
    {
        g.drawString(String.valueOf(rupees/27),20,20);
    }
}
```

```

    }
    else
        if(other.equals("Canada"))
        {
            g.drawString(String.valueOf(rupees/35),20,20);
        }
        else
            g.drawString("I Can't convert for such country",20,20);
    }
}

```

### currency.mft :

Manifest-Version: 1.0

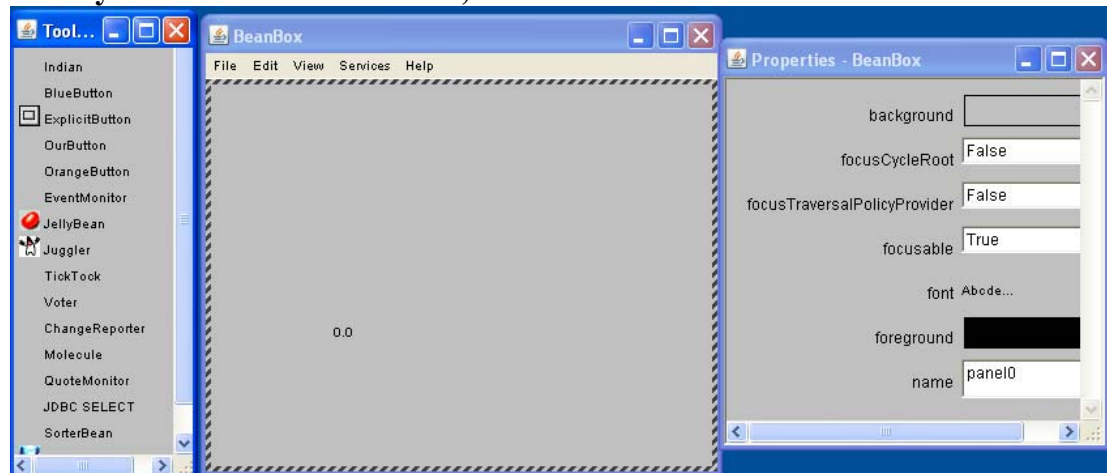

Java-Bean: True

Name: currency/Indian.class

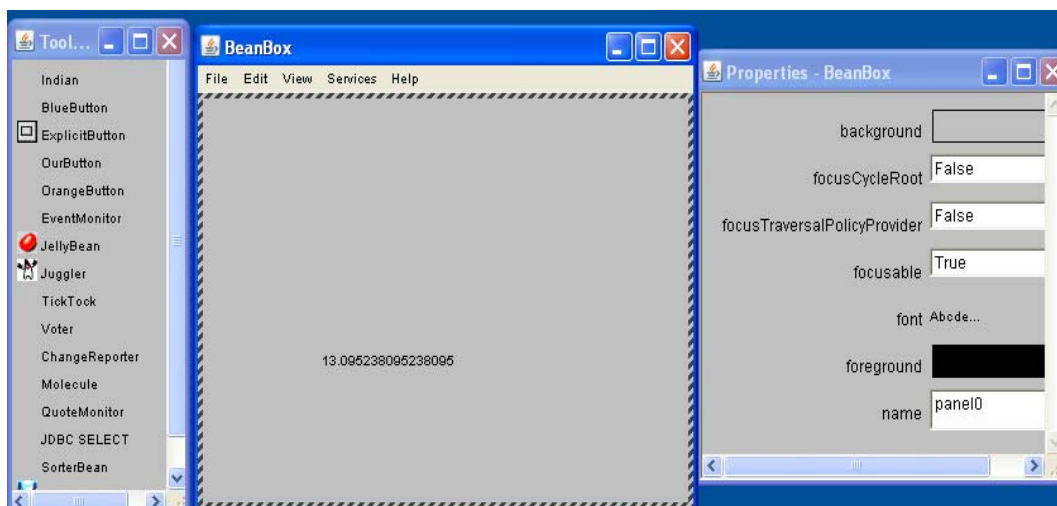

Created-By: 1.6.0 (Sun Microsystems Inc.)

### OUTPUT :

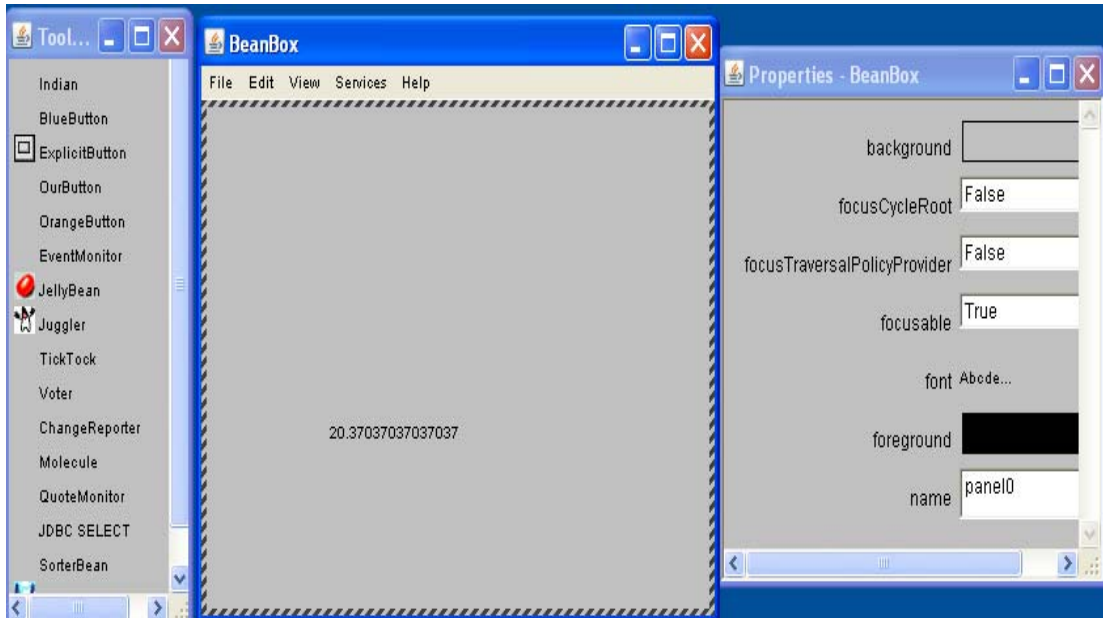

**Initially the beans window will be,**

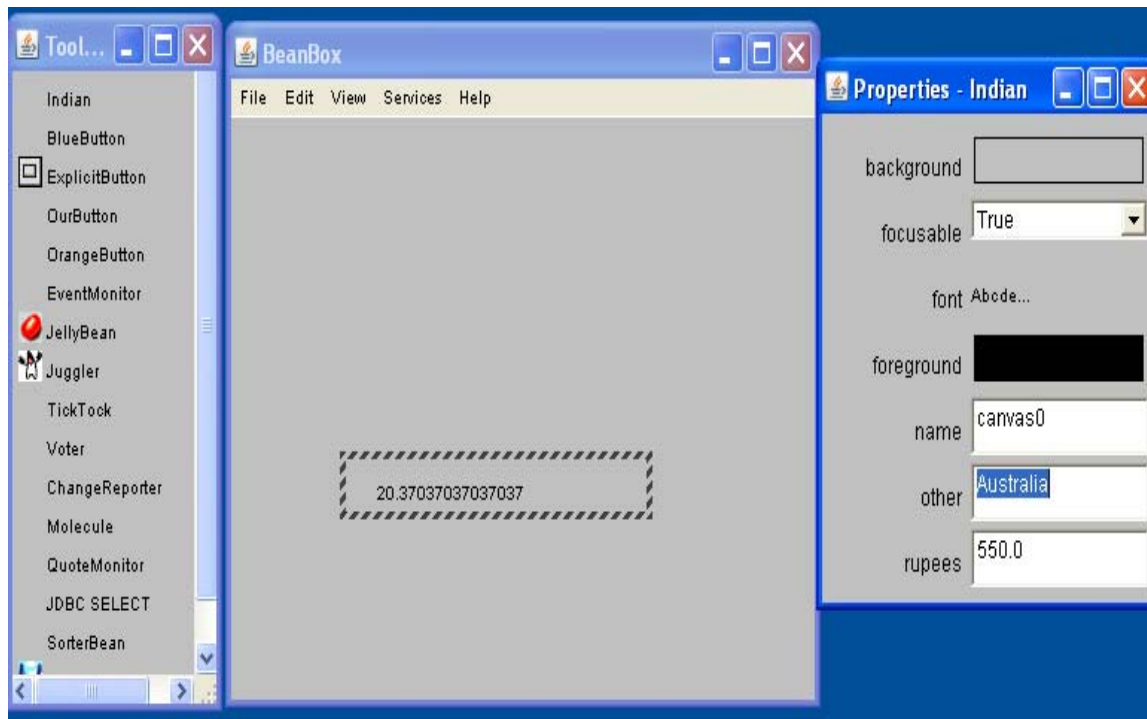

**India 550 rs converted into US dollorand shown in Beanbox window like 13..095**

**India 550 rs converted into Australia dollor and shown in Beanbox window like**

**To select different country we have to enter in highlighted space,**

5. Create two beans traffic light(only 3 colors –red,green,yellow)and automobile(implemented as a Textbox which states its state/movement).the state of the Automobile should depend on the following Light Transition Table.

Light Transition	Automobile State
Red ->yellow	Ready

**TrafficPerson :**

```

package demo;
import java.awt.Panel;
import java.awt.event.*;
import java.io.PrintStream;
import java.io.Serializable;
import javax.swing.JTextField;
import java.beans.*;
public class TrafficPerson extends Panel
    implements Serializable, PropertyChangeListener
{
    public TrafficPerson()
    {
        tx = new JTextField(12);
        state="Ready";
        tx.setHorizontalAlignment(JTextField.LEFT);
        tx.setText("Ready");
        tx.setEnabled(false);
        add(tx);
    }
    public void change()
    {
        if(state.equals("Ready"))
        {
            state="Move";
            tx.setText(state);
        }
        elseif(state.equals("Move"))
        {
            state="Stopped";
            tx.setText(state);
        }
        elseif(state.equals("Stopped"))
        {
            state="Ready";
            tx.setText(state);
        }
    }

**TrafficLight.mft :**

Manifest-Version: 1.0

Name: mypack/TrafficLight.class

Java-Bean: True

**TrafficPerson.mft :**

Manifest-Version: 1.0

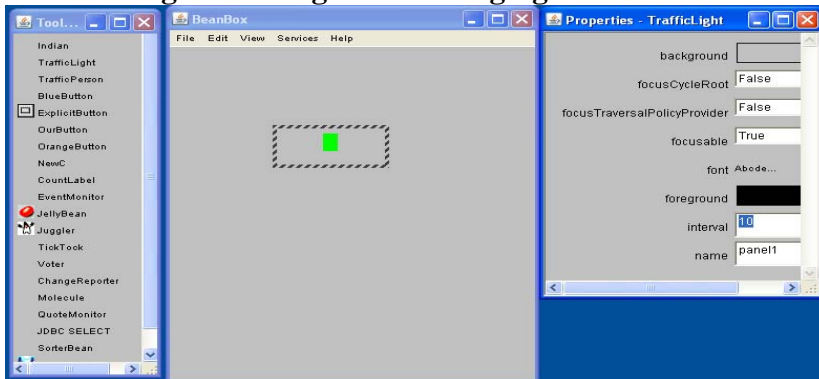

Java-Bean: True

Name: demo/TrafficPerson.class

Created-By: 1.6.0 (Sun Microsystems Inc.)

**OUTPUT :**

After setting TrafficLight and changing interval to 10 sce..

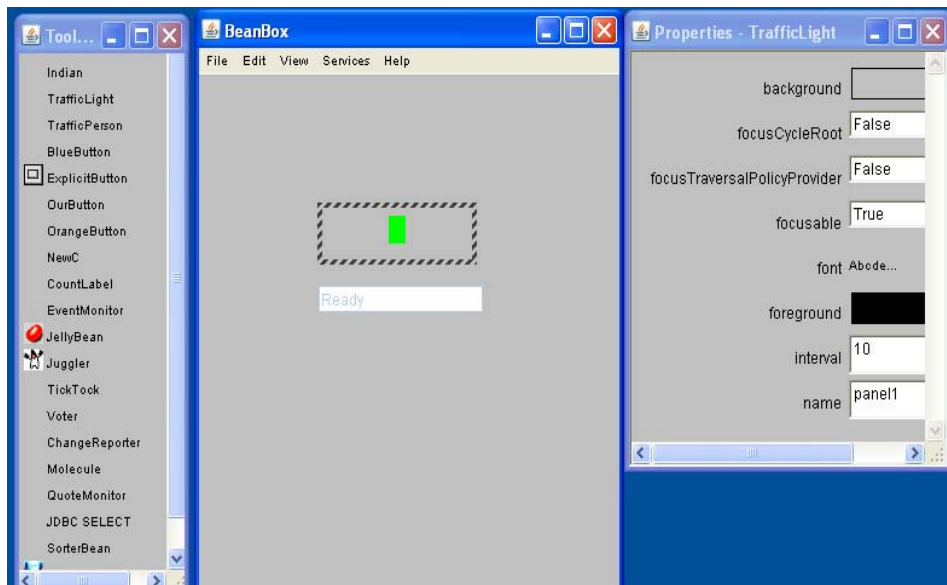

After setting the TrafficPerson, TrafficLight in the

Beanwindow...

the light is changing to yellow,,,the person window is showing ready....

**6. Install TOMCAT web server. Convert the static webpages of assignments 2 into dynamic webpages using servlets and cookies. Hint: Users information (user id, password, credit card number) would be stored in web.xml. Each user should have a separate Shopping Cart.**  
**PROCEDURE:**

First install the tomcat into the system.

Then make a subdirectory(eg., tr) in the \tomcat\webapps.

Under tr create WEB-INF directory and also place the html files in this tr directory only.

Next under WEB-INF create two subclasses lib,classes and web.xml

Next place all the class files under the classes and jar files(servlet-api.jar,classes12.jar etc...) under lib subdirectories.

After this start tomcat by giving the following command at the instll\_dir>tomcat>bin

Catalina.bat run

At the I.E(web browser) give the url as http://localhost:8080//tr/htmlfile or servlet url pattern

Portno 8080 is assigned for the tomcat.

```

### **PROCEDURE:**

#### **Step 1:**

in tomcat install directory  
Open tomcat/webapps  
Create a subdirectory(ts)  
Copy the struts-blank.war file  
At that directory path in cmd give the command as  
Jar xvf struts-blank.war

#### **Step 2:**

create a directory (work in e:\) and copy struts.jar,servelet-appi.jar into work d directory.Then set the classpath as  
set classpath=struts.jar;servelet-api.jar;  
then copy the ActionOne.class file to webapps/ts/WEB-INF/classes

#### **ActionOne.java:**

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
import org.apache.struts.action.*;
public class ActionOne extends Action
{
    publicActionForwardexecute(ActionMappingmapping,ActionFormform,HttpServletRequest
request,HttpServletResponse response)throws Exception
{
    System.out.println("---Action executed----");
    PrintWriter pw=response.getWriter();
    pw.println("HELLO WORLD!");
    return null;
}
}
```

#### **Step 3:**

##### **Struts-Config.xml file**

```
<?xml version="1.0" encoding="UTF-8"?>
<struts-config>
<action-mappings>
<action path="/xxx" type="ActionOne"/>
</action-mappings>
</struts-config>
```

#### **Step 4:**

```
<?xml version="1.0" encoding="ISO-8859-1"?>
<web-app>
<servlet>
<servlet-name>action</servlet-name>
<servlet-class>org.apache.struts.action.ActionServlet</servlet-class>
<init-param>
<param-name>config</param-name>
<param-value>/WEB-INF/struts-config.xml</param-value>
</init-param>
<init-param>
<param-name>debug</param-name>
<param-value>2</param-value>
</init-param>
<load-on-startup>2</load-on-startup>
</servlet>
<!--Standard Action Servlet Mapping -->
<servlet-mapping>
<servlet-name>action</servlet-name>
<url-pattern>*.do</url-pattern>
</servlet-mapping>
<!-- The Usual Welcome File List -->
<welcome-file-list>
<welcome-file>index.jsp</welcome-file>
</welcome-file-list>
<!-- Struts Tag Library Descriptors -->
<taglib>
<taglib-uri>/tags/struts-bean</taglib-uri>
<taglib-location>/WEB-INF/struts-html.tld</taglib-location>
</taglib>
<taglib>
<taglib-uri>/tags/struts-logic</taglib-uri>
<taglib-location>/WEB-INF/struts-logic.tld</taglib-location>
</taglib>
<taglib>
<taglib-uri>/tags/struts-nested</taglib-uri>
<taglib-location>/WEB-INF/struts-nested.tld</taglib-location>
</taglib>
<taglib>
<taglib-uri>/tags/struts-tiles</taglib-uri>
<taglib-location>/WEB-INF/struts-tiles.tld</taglib-location>
</taglib>
</web-app>
```

**Step 5:**

Then in I.E give the url as <http://localhost:8080/ts/xxx.do>
